

# How to use this beamer templates

@cymprfh

# What is Beamer?

- ❖ beamer is a  $\text{\LaTeX}$  class
- ❖ You can write a cool presentation in  $\text{\TeX}$ 
  - ❖ like this

## A preamble:

```
\documentclass[dvipdfmx,default,cjk]{beamer}
```

# Presentation Tools

- ❑ PowerPoint (GUI)
- ❑ Keynote (GUI)
- ❑ Beamer (Text)

GUI is difficult. Writing  $\text{T}_{\text{E}}\text{X}$  is also difficult.  
Find more convenient tools!

# Use Pandoc

Pandoc - [pandoc.org](http://pandoc.org)

is a **document**  $\mapsto$  **document** convert tool

❖ many document formats are supported!!

1. **.mkd** (markdown)
2. **.html** **.xml**
3. **.docx** (Microsoft Words)
4. **.tex** **.pdf**
5. and more

❖ **template** is used for convert

- ❖ pandoc has many templates for many formats
- ❖ you can custom and use your own templates

# Example

## a document .tex from .mkd

Pandoc use usual **template** for .tex. The formats of input and output are inferred from the file extensions.

```
pandoc -o report.tex report.mkd
```

## a slide .tex from .mkd

specify the output format as beamer

```
pandoc -t beamer -o report.tex report.mkd
```

# My Way to Write Presentation Slides

1. write .mkd
2. get beamer file by pandoc

```
pandoc -s -t beamer \  
  --template ./themes/pondering.tex \  
  -o out.tex in.mkd
```

(also see Makefile)

3. compile with platex and get .pdf

```
platex out  
dvipdfmx out  
zathura out.pdf
```

# enumerate and itemize

1. one

2. two

- ❖ 2

- ❖ 弐

3. three

- ❖ itemize

- ❖ subitemize

- ❖ subsubitemize

- ❖ subsubitemize

- ❖ itemize

- ❖ itemize

# Block

In mkd, a `###` makes a block

**block title**

block inner

**block title**

block inner

# code highlight

```
seq 1 100 | factor | awk 'NF==2{print $2}'  
main :: IO ()  
if __name__ == "__main__":  
    pass
```

# embed $\text{T}_{\text{E}}\text{X}$

## BTW:

Markdown grammar is poor. To realize a little advanced, we need  $\text{T}_{\text{E}}\text{X}$ .

1.  $\text{T}_{\text{E}}\text{X}$  can be embed in `mkd`
  - ❖ which are never changed by pandoc
2. All inner of a  $\text{T}_{\text{E}}\text{X}$  are judged as  $\text{T}_{\text{E}}\text{X}$ 
  - ❖ This means: cannot write `mkd` in  $\text{T}_{\text{E}}\text{X}$

# Example - twocolumns

Markdown has no grammar about columns. My template defined special syntax ( $\text{\TeX}$ macros) for columns.

$\backslash$ BeginColumn{.6}		$\backslash$ begin{columns}
Left column		$\backslash$ column{.6\textwidth}
$\backslash$ Column	generates	Left column
Right column		$\backslash$ column{.4\textwidth}
$\backslash$ EndColumn{.4}		Right column
		$\backslash$ end{columns}
